API

API tokenDefault API token created on sign up.

Manage tokens

List of most relevant API endpoints. See [API reference](#) for full details.

The URLs below contain your API token. Don't share them with untrusted parties.

Run Actor

View API reference

Runs this Actor. The POST payload including its Content-Type header is passed as INPUT to the Actor (typically application/json). The Actor is started with the default options; you can override them using various URL query parameters.

POSThttps://api.apify.com/v2/acts/account56-email-verifier/runs?token=***

Hint: By adding the method=POST query parameter, this API endpoint can be called using a GET request and thus used in third-party webhooks.

Run Actor synchronously and get a key-value store record

View API reference

Runs this Actor and waits for it to finish. The POST payload, including its Content-Type, is passed as the Actor input. The OUTPUT record (or any other specified with the outputRecordKey query parameter) from the default key-value store is returned as the HTTP response. The Actor is started with the default options; you can override them using various URL query parameters. Note that long HTTP connections might break.

POSThttps://api.apify.com/v2/acts/account56-email-verifier/run-sync?token=***

Hint: This endpoint can be used with both POST and GET request methods, but only the POST method allows you to pass input.

Run Actor synchronously and get dataset items

View API reference

Runs this Actor and waits for it to finish. The POST payload including its Content-Type header is passed as INPUT to the Actor (usually application/json). The HTTP response contains the Actor's dataset items, while the format of items depends on specifying dataset items' format parameter.

POSThttps://api.apify.com/v2/acts/account56-email-verifier/run-sync-get-dataset-items?token=***

Hint: This endpoint can be used with both POST and GET request methods, but only the POST method allows you to pass input.

Get Actor

View API reference

Returns settings of this Actor in JSON format.

GEThttps://api.apify.com/v2/acts/account56-email-verifier?token=***

Test endpoint

Get a list of Actor versions

View API reference

Returns a list of versions of this Actor in JSON format.

GEThttps://api.apify.com/v2/acts/account56-email-verifier/versions?token=***

Test endpoint

Get a list of Actor webhooks

View API reference

Returns a list of webhooks of this Actor in JSON format.

GEThttps://api.apify.com/v2/acts/account56-email-verifier/webhooks?token=***

Test endpoint

Update Actor

View API reference

Updates settings of this Actor. The POST payload must be a JSON object with fields to update.

PUThttps://api.apify.com/v2/acts/account56-email-verifier?token=***

Update Actor version

View API reference

Updates version of this Actor. Replace the 0.0 with the updating version number. The POST payload must be a JSON object with fields to update.

PUThttps://api.apify.com/v2/acts/account56-email-verifier/versions/0.0?token=***

Delete Actor

View API reference

Deletes this Actor and all associated data.

DELETEhttps://api.apify.com/v2/acts/account56-email-verifier?token=***

Get a list of builds

View API reference

Returns a list of builds of this Actor in JSON format.

GEThttps://api.apify.com/v2/acts/account56-email-verifier/builds?token=***

Test endpoint

Build Actor

View API reference

Builds a specific version of this Actor and returns information about the build. Replace the 0.0 parameter with the desired version number.

POSThttps://api.apify.com/v2/acts/account56-email-verifier/builds?token=***&version=0.0

Hint: By adding the method=POST query parameter, this API endpoint can be called using a GET request and thus used in third-party webhooks.

Get a list of runs

[View API reference ↗](#)

Returns a list of runs of this Actor in JSON format.

GET https://api.apify.com/v2/acts/account56~email-verifier/runs?token=***

Test endpoint

Get last run

[View API reference ↗](#)

Returns the last run of this Actor in JSON format.

GET https://api.apify.com/v2/acts/account56~email-verifier/runs/last?token=***

Test endpoint

Hint: Add the status=SUCCEEDED query parameter to only get the last successful run of the Actor.

Get last run dataset items

[View API reference ↗](#)

Returns data from the default dataset of the last run of this Actor in JSON format.

GET https://api.apify.com/v2/acts/account56~email-verifier/runs/last/dataset/items?token=***

Test endpoint

Hint: Add the status=SUCCEEDED query parameter to only get the last successful run of the Actor. This API endpoint supports all the parameters of the [Dataset Get Items](#) endpoint.

Get OpenAPI definition

[View API reference ↗](#)

Returns the OpenAPI definition for the Actor's default build with information on how to run this Actor build using the API.

GET <https://api.apify.com/v2/acts/account56~email-verifier/builds/default/openapi.json>

Test endpoint
